

Cotton System Consumption and Stocks

ISSN: 2378-2471

Released June 1, 2016, by the National Agricultural Statistics Service (NASS), Agricultural Statistics Board, United States Department of Agriculture (USDA).

Highlights

April 2015 contained 30 days.

March 2016 contained 31 days.

April 2016 contained 30 days.

Extra long staple cotton consumed on the cotton system was 1.11 million pounds in April 2016, up 4 percent from March 2016 and up 11 percent from April 2015. April 2016 stocks on hand on the last Saturday of the month totaled 1.2 million pounds down 3 percent from March 2016 and down 37 percent from April 2015.

Total Manmade fiber consumed on the cotton system was 36.5 million pounds during April 2016, up 14 percent from March 2016 and up 3 percent from April 2015. Of the total manmade fiber consumed, 91 percent was polyester staple.

Total number of spindles on the cotton system was 1.20 million during April 2016. Active spindles consuming 100 percent cotton was 658 thousand in April 2016, up 1 percent from March 2016 and up 9 percent from April 2015.

Statistical Methodology

Survey Procedures: *Cotton System Consumption and Stocks* is part of the Current Agricultural Industrial Reports (CAIR) program. CAIR reports are administered under NASS's Census of Agriculture program. Response to CAIR surveys are required by law (Title 7, U.S. Code). Data are collected from all known mills that consume cotton.

The census universe was determined during operation profile interviews which were completed for each potential facility to identify the presence of cotton consumption and spindle activity in 2014.

In the Cotton and Manmade Fiber Staple survey questionnaires, mills are asked for previous calendar month data on cotton and manmade fiber consumed, stocks and spindle activity. Mills are mailed questionnaires with the options of completing the survey by mail or by Electronic Data Reporting (EDR). For surveys not received in a reasonable amount of time, telephone follow-up is conducted.

Estimating Procedures: Imputation is done for operations with non-response by using historical data and current data relationships. Data for reporting firms are added to estimates for non-reporting firms to obtain National totals.

Revision Policy: Data are revised the following month based on late reports or corrected data. Final figures are published in the annual summary of the following year.

Reliability: Approximately 50 reports are received each month which represent about 95 percent of total spindles. Monthly data can vary due to different firms reporting month to month. Survey data are also subject to non-sampling errors such as omissions and mistakes in reporting and in processing the data. While these errors cannot be measured directly, they are minimized by carefully reviewing all reported data for consistency and reasonableness.
